

DO YOU KNOW YOUR HEART SCORE?

With heart disease being the #1 killer of men and women alike, it is important to know what your heart score is and where you can find more information on the prevention of this disease. Consider this:

- Every 29 seconds an American suffers a heart attack
- Every 60 seconds an American dies from a heart attack
- 50% of men and 63% of women who die suddenly of heart disease have no previous symptoms
- About 80% of the people under 65 who died of heart disease do so during their first attack.

CT Coronary Angiography, which includes CT Calcium Artery Scoring, is one of the most advanced methods available today to detect heart disease in its earliest stages.

CT Coronary Angiography - \$300

This noninvasive test uses our 320-slice CT scanner to provide a precise picture of how the blood is flowing through the arteries and whether there are any restrictions in blood flow. The images are very similar to those provided by invasive heart catheterization, without catheters and without the need to insert equipment into the body.

What is the 320 CT Scanner?

The Aquilion ONE 320-Slice CT scanner is the most powerful X-ray imaging device in the world, and no other hospital in the tri-state area has this groundbreaking technology.

This \$3.4 million super-scanner is unparalleled in its capabilities, which include:

- Detection and measurement of toothpick thin blockages in blood vessels
- Detection of nearly imperceptible changes in blood flow
- Creation of flawless 3-D images of any organ, joint, or body part, in less than a heartbeat
